

**U.S. Department of Agriculture
Food and Nutrition Service
Administrative Review Branch**

Mimi Tobacco & Grocery LLC,

Appellant,

v.

**Office of Retailer Operations and
Compliance,**

Respondent.

Case Number: C0209216

FINAL AGENCY DECISION

The U.S. Department of Agriculture (USDA), Food and Nutrition Service (FNS) finds that there is sufficient evidence to support the determination by the Office of Retailer Operations and Compliance (“ROC”) to impose a permanent disqualification from participating as an authorized retailer in the Supplemental Nutrition Assistance Program (SNAP) against Mimi Tobacco & Grocery LLC (“Appellant”).

ISSUE

The purpose of this review is to determine whether the ROC took appropriate action, consistent with Title 7 of the Code of Federal Regulations (CFR) § 278.6(a), (c) and (e)(1)(i), when it imposed a Permanent Disqualification against Appellant on January 6, 2021.

AUTHORITY

According to 7 U.S.C. § 2023 and its implementing regulations at 7 CFR § 279.1, “A food retailer or wholesale food concern aggrieved by administrative action under § 278.1, § 278.6 or § 278.7 . . . may . . . file a written request for review of the administrative action with FNS.”

CASE CHRONOLOGY

In a letter dated June 13, 2018, the ROC charged Appellant with trafficking, as defined in Section 271.2 of the SNAP regulations. This charge was based on a series of SNAP transaction patterns that “establish clear and repetitive patterns of unusual, irregular, and inexplicable activity for your type of firm.” This letter of charges states: “As provided by Section 278.6(e)(1) of the SNAP regulations, the sanction for trafficking is permanent disqualification.” The letter

also states that “. . . under certain conditions, FNS may impose a civil money penalty (CMP) . . . in lieu of a permanent disqualification of a firm for trafficking.”

Appellant replied to the ROC’s charges in writing. The record reflects that the ROC received and considered the information provided prior to making a determination. The ROC determined that Appellant’s contentions did not outweigh the evidence that the store was trafficking. Based on the preponderance of evidence, the ROC concluded that trafficking is the most probable explanation for the questionable transactions listed in the charge letter attachments.

The ROC issued a determination letter dated January 6, 2021. This letter informed Appellant that it was permanently disqualified from participation as an authorized retailer in SNAP in accordance with Section 278.6 (c) and 278.6(e)(1) for trafficking violations. The letter also states the ROC considered Appellant’s eligibility for a trafficking civil money penalty (CMP) according to the terms of Section 278.6(i) of the SNAP regulations. The ROC determined that Appellant was not eligible for the CMP because Appellant had not submitted sufficient evidence to demonstrate that it had established and implemented an effective compliance policy and program to prevent SNAP violations.

On January 19, 2021, Appellant appealed the ROC’s determination and requested an administrative review of this action. The appeal was granted.

STANDARD OF REVIEW

In an appeal of an adverse action, Appellant bears the burden of proving by a preponderance of evidence that the administrative action should be reversed. That means Appellant has the burden of providing relevant evidence that a reasonable mind, considering the record as a whole, would accept as sufficient to support a conclusion that the argument asserted is more likely to be true than untrue.

CONTROLLING LAW

The controlling law in this matter is contained in the Food and Nutrition Act of 2008, as amended (7 U.S.C. § 2021), and implemented through regulation under Title 7 CFR Part 278. In particular, 7 CFR § 278.6(a) and (e)(1)(i) establish the authority upon which a permanent disqualification may be imposed against a retail food store or wholesale food concern in the event that personnel of the firm engaged in trafficking of SNAP benefits.

7 CFR § 278.6(a) states, in part:

FNS may disqualify any authorized retail food store . . . if the firm fails to comply with the Food and Nutrition Act of 2008, as amended, or this part. Such disqualification shall result from a finding of a violation on the basis of evidence that may include facts established through on-site investigations, inconsistent redemption data, evidence obtained through a transaction report under an **electronic benefit transfer system**

(Emphasis added.)

7 CFR § 278.6(a) states, in part:

Any firm considered for disqualification ... under paragraph (a) of this section... shall have full opportunity to submit to FNS information, explanation, or evidence concerning any instances of noncompliance before FNS makes a final administrative determination. The FNS regional office shall send the firm a letter of charges before making such determination. The letter shall specify the violations or actions which FNS believes constitute a basis for disqualification. The letter shall inform the firm that it may respond either orally or in writing to the charges contained in the letter within 10 days of receiving the letter . . .

7 CFR § 278.6(c) reads, in part:

The letter of charges, the response, and any other information available to FNS shall be reviewed and considered by the appropriate FNS regional office, which shall then issue the determination. In the case of a firm subject to permanent disqualification under paragraph (e)(1) of this section, the determination shall inform such a firm that action to permanently disqualify the firm shall be effective immediately upon the date of receipt of the notice of determination from FNS, regardless of whether a request for review is filed in accordance with part 279 of this chapter.

7 CFR § 278.6(e)(1)(i) reads, in part:

FNS shall . . . [d]isqualify a firm permanently if personnel of the firm have trafficked as defined in § 271.2.

Trafficking is defined in 7 CFR § 271.2, in part, as:

The buying, selling, stealing, or otherwise effecting an exchange of SNAP benefits issued and accessed via Electronic Benefit Transfer (EBT) cards, card numbers and personal identification numbers (PINs), or by manual voucher and signature, for cash or consideration other than eligible food, either directly, indirectly, in complicity or collusion with others, or acting alone.”

Also at 7 CFR § 271.2, eligible food is defined as:

Any food or food product intended for human consumption except alcoholic beverages, tobacco and hot food and hot food products prepared for immediate consumption . . .

7 CFR § 278.6(b)(2)(ii) states, in part:

Firms that request consideration of a civil money penalty in lieu of a permanent disqualification for trafficking shall have the opportunity to submit to FNS information and evidence that establishes the firm’s eligibility for a civil money penalty in lieu of a permanent disqualification in accordance with the criteria included in § 278.6(i). This information and evidence shall be submitted within 10 days, as specified in § 278.6(b)(1).

7 CFR § 278.6(b)(2)(iii) states:

If a firm fails to request consideration for a civil money penalty in lieu of a permanent disqualification for trafficking and submit documentation and evidence of its eligibility within the 10 days specified in § 278.6(b)(1), the firm shall not be eligible for such a penalty.

SUMMARY OF CHARGES

The charges under review were based on an analysis of SNAP Electronic Benefit Transfer (EBT) transaction data during the period from February 2018 through April 2018. This analysis identified the following patterns of SNAP transaction activity that indicate trafficking:

- An inordinate number of transactions ending in same-cents values;
- Multiple transactions made from the same accounts in unusually short time frames; and,
- Unusually large transactions.

The attachments enclosed with the charge letter specify the questionable and unusual SNAP transactions indicative of trafficking which were conducted at Appellant during the review period.

APPELLANT'S CONTENTIONS

Appellant's responses regarding this matter are essentially as follows:

- Appellant denies the allegations.
- Appellant is approximately 600 sq. ft.
- Most households redeem nearly all their benefits within the first two weeks of the month.
- SNAP participants are more likely to shop at convenience stores and small grocery stores, and customers of these stores are among the most loyal customers.
- Convenience stores and similar stores had a 3% increase in customers over 2015.
- Appellant's sales exceed the amount of its SNAP activity.
- The store stocks the majority of a SNAP household's preferred needs, so it is reasonable to expect SNAP customers to spend the majority of their benefits at Appellant.
- The ALERT system has not been independently proven accurate in finding fraud. Data analysis is prone to error without accurate context. The analyst overly relied on the results of the ALERT system when issuing a charge of trafficking because of confirmation bias. The analyst made incorrect assumptions about customer shopping patterns and circumstances and failed to take into account local differences.
- There were no interviews of SNAP participants, contemporaneous store comparisons, or item-by-item price comparisons with other stores.

- Recent administrative review cases discuss the precedent that should be considered in this case: *Howard's Quik Mart vs. Retailer Operations Division* and *Gloesis Group vs. Retailer Operations Division*.
- Past reversals by the Administrative Review Branch prove that ALERT scans on their own are insufficient to support trafficking.
- There is no basis to support the standard of proof used in administrative review cases.
- Only 1% of cases were reversed by the Administrative Review Branch in 2019. Those reversals should have included detailed explanations.
- If allegations were raised in cases that were reversed, Appellant can conclude those were the reasons accepted by FNS for the reversal, even though FNS did not cite those reasons for the reversal.
- Appellant enters same cents amount for purchases at irregular intervals when necessary to expedite purchases.
- Same-cents transactions are not suspicious.
- Back-to-back transactions are because households participate in co-shopping where different household members split benefits evenly or proportionately and separately shop at Appellant during a short period of time.
- Multiple transactions occurring over the span of hours are not inherently suspicious according to *Onukwughu v. U.S.*
- Past Administrative Review Branch decisions have identified a number of certain explanations which adequately explain the presence of Scan B2 and Scan F transactions (*Mega Food Store, Inc. vs. Retailer Operations Division*, Case C0210634; *SK Food Mart 1 vs. Retailer Operations Division*, Case C020572; *Namaste Mart #1 vs. Retailer Operations Division*, Case 0205960; *Tommy's Mini Mart vs. Retailer Operations Division*, Case C0208969; *Gloesis Group vs. Retailer Operations Division*, Case C0189046; *Nino's Market vs. Retailer Operations Division*, Case C0218184; *Howard's Quik Mart vs. Retailer Operations Division*, Case C0192424; *J.C.'s Hammon vs. Retailer Operations Division*, Case No. C0200273; and, *Gorkhas Grocery Store vs. Retailer Operations Division*, Case No. C0197146).
- There are no logistic barriers to the transactions included in the charge letter.
- Appellant uses two registers.
- SNAP participants shop at Appellant because it is more convenient and smaller.
- SNAP customers shop at Appellant because they lack consistent transportation.
- Appellant offers a broad variety of foodstuffs.
- Large transactions are because SNAP participants are buying sweetened beverages, salty snacks, meat, and other items sold by Appellant.
- Larger purchases may be because the SNAP households are larger.
- There are only 11 stores within one mile of Appellant, with the nearest store located .09 miles away. Some of those stores are located close together, increasing competition. Appellant has superior inventory to some of these stores.
- Failure to provide evidence in past Administrative Review Branch decisions - such as cash register receipts, accounting records, or inventory purchase invoices – has led to sustaining trafficking determinations in other cases (i.e., *TG Mini Mart*, Case No. C0203554, and *Lima Mini Mart Inc.*, Case No. C0208310).
- Appellant requests a CMP.

- Customers make multiple purchases because they have forgotten items or because they make multiple purchase without leaving the store.
- *Skyson USA, LLC v. U.S.* cautions against relying too much on the ALERT system.

In support of its contentions, Appellant provided the following documentation:

- Four pages of an April 2016 article in *Convenience Store News*;
- Ten pages of receipts and invoices;
- Thirteen store photos;
- Six pages of sales and use tax summaries;
- A USDA report entitled *Benefit Redemption Patterns in the Supplemental Nutrition Assistance Program in Fiscal Year 2017*;
- A 38-page FMI report entitled *U.S. Grocery Shopping Trends, 2016*; and,
- A November 2016 USDA report entitled *Foods Typically Purchased by Supplemental Nutrition Assistance (SNAP) Households*.

These explanations may represent only a brief summary of Appellant’s contentions. However, in reaching a decision, full consideration has been given to all contentions presented, including any others that have not been specifically listed here.

ANALYSIS AND FINDINGS

Regarding Appellant’s denial of violations, this review examines the relevant information regarding the determination. Once the ROC establishes trafficking occurred, Appellant bears the burden of providing relevant evidence to support a conclusion, considering the record as a whole, that that it did not engage in trafficking. If this is not demonstrated, the case will be sustained. Without supporting evidence and rationale, assertions that the firm has not violated program rules do not constitute valid grounds for overturning the determination.

Appellant stated that failure to provide evidence in past Administrative Review Branch decisions has led to sustaining trafficking determinations in those cases. While the circumstances in those other cases are not relevant to this review, as stated in the Standard of Review above, Appellant does have the burden of providing relevant evidence in support of its contentions.

Appellant’s counsel included broader concerns about the administrative review process that do not relate to the present case, including that Administrative Review Branch rubberstamps ROC determinations and there is no basis for the standard of proof used in administrative review cases. As these concerns do not relate to the present case, they will not be addressed here other than to note Appellant’s counsel failed to state that the 2019 Retailer Management Year End Summary stated the Administrative Review Branch sustained 88.7% of determinations in 2019. Regarding standard of proof concerns, Appellant’s counsel may want to review *Irobe v. USDA* No. 17-1943 (1st Cir. 2018).

Store Characteristics

In reaching a disqualification determination, the ROC considered information obtained during a May 14, 2018 store visit conducted by a USDA contractor to observe Appellant's operation, stock, and facilities. This store visit information was used to ascertain if there were justifiable explanations for the firm's irregular SNAP transaction patterns. The store visit report documented the following store size, description, and characteristics:

- Store size is approximately 700 square feet with no area of food storage outside of public view;
- Available inventory of SNAP-eligible food items showed stock composed predominantly of inexpensive items, which is typical of a convenience store;
- Only one cash register and one electronic SNAP terminal device;
- No shopping carts or hand baskets;
- Scanner and no conveyor belts;
- No evidence of a wholesale business such as posted prices or separate entrances for wholesale customers; and,
- No meat or seafood specials or bundles.

In addition, the store's checkout counter space area was cluttered, small and surrounded by plastic barriers allowing very little surface area to place large purchases and making it impractical to process more than one customer at a time.

Appellant asserts it uses two registers, however the store visit documentation does not support this statement. The photos submitted by Appellant also do not show a second register.

Appellant argues it offers a broad variety of foodstuffs. Appellant's offerings are consistent with that of a typical convenience store. Appellant offered only three items priced \$6 or higher. There was no indication that SNAP households were inclined to visit the store regularly to purchase large quantities of grocery items. The available food was primarily of a low-dollar value and there was no hint that the firm sold items in bulk. Given the available inventory, there was no sign that Appellant would be likely to have SNAP redemption patterns that differed significantly from those of similarly-sized competitors.

Same-Cents Transactions

An interesting characteristic of questionable transactions is that many of them end in a same-cents value. Sets of repeating digits are highly unorthodox and do not regularly occur in legitimate transactions; such transaction structuring is a common hallmark of trafficking activity. In the absence of any compelling rationale to the contrary, these patterns strongly indicate that the firm is trafficking in SNAP benefits.

Attachment 1 to the charge letter documents transactions ending in same-cents values. A review of the store visit record indicates that the store did not promote any specials that could explain the pattern of large numbers of transactions ending in these values. This attachment includes 197 same-cents transactions **5 U.S.C. § 552 (b)(6) & (b)(7)(C)**.

There were a total of 311 SNAP transactions that met the parameters of this attachment. Of these transactions, a total of 197 (63%) ended in “00” cents. In other words, more than three out of every five of these transactions was an even-dollar transaction.

A number of households whose transactions were cited in other attachments to the charge letter also consistently made transactions that ended in same-cents values. Transactions appearing in more than one attachment to the charge letter are more suspicious as they display multiple patterns common to trafficking transactions.

The prices evident in the store visit documentation show a pricing structure typical of convenience stores, where items are often priced to end in “.x9” cents. With such a pricing structure, it is unlikely for transactions to naturally end in even-dollar values with the frequency they occurred during the review period. Even if many of Appellant’s prices were for even-dollar amounts, the purchase of even a single additional item that was not priced at an even-dollar amount would rule out an even-dollar transaction.

Appellant's contends that the inordinate number of transactions ending in same-cents values is the result of staff sometimes rounding off prices on transactions when necessary to expedite purchases. Since Appellant would have had to total all the items in the transaction before it could round off the amount, it is unclear how rounding off prices in the apparently random manner contended by Appellant would expedite SNAP purchases. The store documentation also confirmed that Appellant does not round off transactions. As mentioned above, it is also interesting that a number of the transactions the owner selected to round off also happen to have other characteristics common to trafficking transactions.

Appellant argues same-cents transactions are not suspicious. Patterns of transactions ending in same-cents amounts indicate that SNAP transaction amounts are contrived. Random data, which legitimate transaction activity approximates, is extremely difficult to produce intentionally; it is very difficult to avoid repetitive patterns when attempting to create the appearance of normal, near-random transactions. That various customers each repeatedly had totals with identical cents values during the review period strains the credibility of Appellant’s declaration that this activity reflected the acceptance of SNAP benefits in exchange for eligible food items. As Appellant has offered no rational explanation for why such patterns might exist, it is reasonable to conclude that these same-cents transactions are the result of trafficking.

Repeat Transactions by the Same Household

Attachment 2 to the charge letter documents the same household conducting back-to-back transactions in unusually short time frames. Violating stores may conduct multiple transactions from the same household account **5 U.S.C. § 552 (b)(6) & (b)(7)(C)** to avoid the detection of single, high-dollar trafficking transactions. There are 61 repeat transactions **5 U.S.C. § 552 (b)(6) & (b)(7)(C)** included in this document.

Appellant argues that there are no logistic barriers to the transactions included in the charge letter because a **5 U.S.C. § 552 (b)(6) & (b)(7)(C)** transaction followed by a

5 U.S.C. § 552 (b)(6) & (b)(7)(C) transaction by the same household

5 U.S.C. § 552 (b)(6) & (b)(7)(C) later is explained by Appellant having two registers. As previously stated, the store visit documentation does not support that Appellant has two registers. In addition, due to the large Plexiglas barrier between the clerk and the customer, processing two sets of groceries separately does not seem feasible. Even if Appellant had two registers, Appellant's contention would involve other logistical challenges. A household must have unloaded part of their groceries at one register and part of their groceries at another register; then, two cashiers arrive at totals for these groceries within seconds of each other, but charge the EBT card in separate, back-to-back transactions. This scenario does not seem likely.

Appellant contends that back-to-back purchases are because SNAP customers lack access to transportation, and that SNAP participants shop at Appellant because it is more convenient and smaller. The record reflects that customers conducting rapid, repetitive, and large transactions at Appellant frequently spent SNAP benefits at better-stocked and more competitively-priced grocery stores, sometimes on or about the same day they shopped at Appellant.

Appellant contends multiple transactions occurring over the span of hours are not inherently suspicious according to *Onukwugha v. U.S.* This case, which supported that the pattern of back-to-back transactions identified by FNS were indicative of trafficking, also stated that transactions "occurring in relatively quick succession" are "extremely suspicious." It notes that this is especially the case when transactions are large and for identical amounts, but also cites as suspicious a variety of examples of back-to-back transactions – similar to those included in the charge letter in this case - that when considered together establish a pattern of trafficking.

Appellant contends there are only 11 stores within one mile of Appellant, with the nearest store located .09 miles away. Appellant also contends that some of these stores are located close together which increases competition, and that Appellant has superior inventory to some of these stores. Appellant is correct that there are 11 stores located within one mile of Appellant. However, the closest store is located .02 miles from Appellant. There is also a medium grocery store located .07 miles away. If being close together results in decreased sales due to competition, Appellant's store would suffer the same outcome. Appellant provides no evidence in support of its assertion that it has superior inventory to some of these stores. An unsubstantiated argument such as this does not provide a valid basis for dismissing the charges or for mitigating the penalty imposed.

The Case Analysis Document identifies much larger stores with more reasonable prices located within one mile of Appellant. There is no basis for unusually high customer attraction to Appellant, there being no great price advantage, profusion of ethnic goods, or special or custom services rendered. Oddly, some SNAP households spent considerably less at the larger stores than at Appellant.

Appellant argues households participate in co-shopping where different household members split benefits evenly or proportionately and separately shop at Appellant during a short period of time. That members of a household share the chore of grocery shopping ("co-shopping") means that household members take turns doing the shopping, not that both shoppers shop on or about the same day. This would defeat the purpose of why households typically share the chore of grocery

shopping. A household is one that purchases and prepares meals together, so there would be no need to split benefits. Households that purchase and prepare meals separately are considered separate households.

The following examples from the ROC's Case Analysis Document show households shopped at better stocked firms on or about the same day as conducting large transactions at Appellant:

5 U.S.C. § 552 (b)(6) & (b)(7)(C).

5 U.S.C. § 552 (b)(6) & (b)(7)(C).

Appellant asserts customers make multiple purchases because they have forgotten items or because they make multiple purchase without leaving the store. Customers sometimes forget an item or see something at the checkout and decide to purchase it after already having completed a transaction. In such instances, it is reasonable to expect the subsequent purchase would be for a nominal amount. This is because it is quite rare to find very expensive items positioned at the checkout area, especially in smaller stores. Also, forgotten goods purchased immediately after a prior transaction typically consist of only one or two items. However, the subsequent transactions exceeded any minor amount. In some cases, the amounts of subsequent transactions equaled or exceeded the preceding transaction total.

While there are legitimate reasons why a SNAP recipient might return to a convenience store in a short period of time, the examples in Attachment 2 indicate a series of purchases that total to large amounts. SNAP benefits are intended to supplement the food budget for households whose net income is near or below the Federal Poverty Level. It is difficult to believe customers who must rely on SNAP benefits to make ends meet prefer to pay higher prices and spend considerable amounts of their benefits at a convenience store. Spending sizable portions of one's SNAP benefit allotment in a convenience store - when there are larger stores at which one also shops that carry more variety of foods at a lower cost - is unreasonable customer behavior. Moreover, households listed in this attachment conducted this strange shopping pattern of making substantial purchases at Appellant multiple times during the review period. Given the common practice of violating retailers breaking up large, suspicious transactions into multiple, smaller transactions to avoid detection, a firm's explanation and evidence for why these transactions are occurring 5 U.S.C. § 552 (b)(6) & (b)(7)(C) in a convenience store should be both rational and compelling. Appellant's explanation is neither.

SNAP Benefit Depletions

Appellant is correct that a government report on SNAP shopping patterns¹ indicates that after the first day of benefit issuance, on average, 80 percent of a household's allotment remains unspent. Even after seven days, 40 percent of benefits still remain unspent. It typically takes 14 days to deplete 80 percent of one's benefits, and 21 days to deplete 90 percent. Appellant implies that as

¹ U.S. Department of Agriculture, Food and Nutrition Service, Office of Research and Analysis, *Benefit Redemption Patterns in the Supplemental Nutrition Assistance Program*, by Laura Castner and Juliette Henke. Project officer: Anita Singh, Alexandria, VA: February 2011.

most of the suspicious transactions occurred during this period of time this must reflect legitimate purchases. Yet, this report also revealed that households most often redeemed their benefits at supermarkets and supercenters, with only four percent of all households never shopping in a supermarket. This is contrary to Appellant's conclusion that because the store stocks the majority of a SNAP household's preferred needs, it is reasonable to expect SNAP customers to spend the majority of their benefits at Appellant.

Appellant contends that SNAP participants are more likely to shop at convenience stores and small grocery stores than non-SNAP participants, and customers of these stores are among the most loyal customers. The article Appellant provides in support of this statement ("Know your Core, Protect Your Core" from *Convenience Store News*) does say that that low income households are more likely to shop at convenience stores, but it does not specifically refer to SNAP households. The article states that the main reason (80.1%) these customers are likely to shop at the store is to buy gas. This not a SNAP-eligible purchase. Appellant also states that many of its customers do not own vehicles. While some of the less common reasons for making purchases at a convenience store include making inexpensive purchases (e.g., snacks, beverages, gum), others are for purchases that SNAP benefits cannot be used (e.g., lottery tickets, cigarettes). The information included in this article does not support Appellant's conclusion regarding SNAP participants' shopping patterns at convenience stores. Even if Appellant is correct, this article does not support that SNAP participants make large purchases at these smaller stores. If anything, it implies the opposite.

Appellant asserted convenience stores and similar stores had a 3% increase in customers over 2015 (from 5% to 8%). Appellant cited a 2016 U.S. Grocery Shopper Trends report which does not reflect the period covered by this investigation. This report also supports that customers are much more likely to shop at supermarkets and superstores.

It is extremely doubtful that a SNAP household making a legitimate purchase would choose to spend a large portion of its monthly allotment at a convenience store with likely higher prices and substantially less inventory than what would be found at a supermarket or superstore. Although many SNAP households do shop early in the month as opposed to later in the month, most households do not spend all or a majority of their monthly benefits in only a few transactions or a single day. Depleting a large portion of one's SNAP balance early in the benefit month, leaving little to purchase food for the remainder of the month, is inconsistent with the normal shopping behavior of SNAP households.

Large Transactions

Appellant insists the store stocks the majority of a SNAP household's preferred needs, so it is reasonable to expect SNAP customers to spend the majority of their benefits at Appellant. Appellant also argues that large transactions are because SNAP participants are buying sweetened beverages, salty snacks, meat, and other items sold by Appellant. The food stock and facilities of Appellant as reported in the store visit documentation do not appear sufficient to provide for all of one's food needs. People generally do not spend large sums at such stores. They usually stop at convenience stores to pick up a few staple food items, such as bread, milk,

or a can or two of food that they may consider are not worth a trip to the supermarket to purchase. It is rare for a convenience store such as Appellant's to have purchases like those included in Attachment 3 to the charge letter. This attachment cites 71 EBT transactions during the three-month period of investigation 5 U.S.C. § 552 (b)(6) & (b)(7)(C). There were also unusual patterns in these transactions; 5 U.S.C. § 552 (b)(6) & (b)(7)(C)

Additionally, many of the charge letter transactions arrive at, or cluster around, certain dollar amounts in \$5 increments (5 U.S.C. § 552 (b)(6) & (b)(7)(C)). Households typically shop to obtain a certain mix of food items, irrespective of the total cost (other than to remain within allotment balances), and do not strive to achieve a particular total. The purchase amount of eligible food items typically approximates a random total. In contrast, firms facilitating trafficking tend to concentrate transactions at particular dollar amounts. In the absence of any compelling rationale to the contrary, the pattern of clustering transactions around certain dollar levels is implausible and indicative of transaction structuring and SNAP-benefit trafficking.

Appellant stated that larger purchases may be because the SNAP households are larger. While this may be true, this does not explain why larger SNAP households are more likely to shop at Appellant rather than other similarly-sized stores. Appellant's transactions significantly exceed the county's average SNAP transaction, which was \$7.51 for this type of store during the three months of the review period. 5 U.S.C. § 552 (b)(6) & (b)(7)(C). Appellant's average transaction is significantly higher than the county's average transaction. As previously stated, Appellant has a limited food stock typical of a convenience store and does not have any features that would induce people to spend substantially more than the typical convenience store purchase amount.

Its large transactions during the review period were also much more frequent than those of similar stores in the state. 5 U.S.C. § 552 (b)(6) & (b)(7)(C).

Based on the store layout, infrastructure, and available inventory, it is not credible that the Appellant would so frequently conduct large transactions closely resembling those typically found at a supermarket or superstore. It is not plausible that the firm's customers would regularly carry very large amounts of merchandise around the store without the benefit of shopping carts or shopping baskets, especially since larger, better-stocked stores are readily available and in the vicinity of the Appellant firm. Appellant is not set up to process high-dollar transactions, as indicated by its lack of equipment to facilitate large transactions and limited counter space. There are no legitimate bases for SNAP customers' unusual attraction to the firm such as a superior selection of staple foods, price advantages, package specials, bulk or promotional items, an extensive variety of otherwise unavailable ethnic food items, or special services rendered. Appellant failed to provide convincing evidence to establish the legitimacy of these excessively large transactions, such as itemized cash register receipts. Based on all of these factors discussed in this section, the large volume of transactions for high-dollar amounts is unlikely to indicate a pattern of legitimate food purchases.

Earlier Court Decision

Appellant contends this case relies on the analysis set forth in *Skyson USA, LLC v. U.S.* This case is not applicable to Appellant's case. Contrary to Appellant's contention that *Skyson USA, LLC* held that data compiled by ALERT was unreliable, the court analyzed all the evidence in support of the disqualification, including additional documents that had not been previously provided to USDA, and determined that the particular evidence in that case did not support a finding of trafficking. The evidence in *Skyson* differs significantly from the evidence in this case.

Earlier Administrative Review Decisions

Appellant asserts that if allegations were raised in cases that were reversed, Appellant can conclude those allegations were the reasons accepted by FNS for the reversal, even though FNS did not cite those reasons for the reversal. Adhering to this premise, Appellant asserts recent administrative review cases discuss the precedent that should be considered in this case including *Howard's Quik Mart vs. Retailer Operations Division*, *Gloesis Group vs. Retailer Operations Division*, and *Gorkhas Grocery Store vs. Retailer Operations Division*. The sentence quoted by Appellant in *Howard's Quik Mart* regarding trafficking being the "only plausible explanation" was incorrectly included in that decision. As stated elsewhere in that decision, as well as earlier in this decision, in an appeal of an adverse action, Appellant bears the burden of proving by a preponderance of evidence that the administrative action should be reversed. Appellant mischaracterizes the findings of *Gloesis Group* as that decision clearly states that the determination was based on the preponderance of the evidence.

The specific precedents attributed to these cases is incorrect. In *Gloesis Group*, the Final Agency Decision stated that the large transactions were explained by the fact that the firm "specializes in high-priced African ethnic items with few low-dollar items and really no convenience foods available." The decision noted the availability of bulk foods and unique African food items, and also stated the firm's invoices supported the redemption activity at Appellant. In *Howard's Quik Mart*, the Final Agency Decision stated the large transactions were explained by cash register receipts showing sales of large amounts of cola products. In *Gorkhas Grocery Store*, the Final Agency Decision also stated the large transactions were explained by cash register receipts. This decision stated these receipts, inventory invoice documentation, the contractor's store visit reports, and the unsuccessful undercover investigation that occurred simultaneous to this EBT analysis case supported Appellant. The precedents that Appellant purports to find in these decisions is not present. The evidence in these three cases also differs significantly from the evidence in this case.

Contrary to Appellant's claim, the Final Agency Decisions in the other administrative review cases do not identify "a number of certain explanations which adequately explain the presence of Scan B2 [and Scan F] transactions." None of these decisions contain the supposed precedents listed by Appellant. For example, in *Tommy's Mini Mart*, Appellant claimed the Final Agency Decision identified the following as adequate explanations for the Scan B2 and Scan F transactions:

- Significant inventory that encourages multiple shopping trips, like the presence of a deli or meat by the pound;
- Lack of transportation for local SNAP households; and,

- Absence of local large SNAP retailers.

However, the analysis in *Tommy's Mini Mart* consisted of a single sentence: "A review of the ROD case file indicated the ROD failed to establish that Appellant trafficked in SNAP benefits." Appellant undermines its credibility in the present case by its apparent willingness to manufacture precedents from previous administrative review decisions.

Invoices

Appellant contends its sales exceed the amount of its SNAP activity. Appellant submitted six pages of sales and use tax summaries and ten pages of receipts and invoices to establish that the store purchased enough inventory to support the total of its SNAP sales. However, the receipts are insufficient to demonstrate that Appellant's sales are sufficient to support the level of its SNAP activity.

Evidence of Trafficking

Appellant argues the ALERT system has not been independently proven accurate in finding fraud, and the analyst overly relied on the results of the ALERT system when issuing a charge of trafficking because of confirmation bias. Appellant also contends that the analyst made incorrect assumptions about customer shopping patterns and circumstances and failed to take into account local differences. Appellant also stated that there were no interviews of SNAP participants, contemporaneous store comparisons, or item-by-item price comparisons with other stores. As previously stated, 7 CFR § 278.6(a) states, in part:

FNS may disqualify any authorized retail food store . . . if the firm fails to comply with the Food and Nutrition Act of 2008, as amended, or this part. Such disqualification shall result from a finding of a violation on the basis of evidence that may include facts established through on-site investigations, inconsistent redemption data, **evidence obtained through a transaction report under an electronic benefit transfer system** (Emphasis added.)

FNS employs a computerized fraud detection tool (ALERT) to identify EBT transactions that form patterns having characteristics indicative of trafficking. Appellant stated that past reversals in administrative review prove that ALERT scans on their own are insufficient to support trafficking. The ALERT tool does not determine that trafficking has occurred. The ROC must still analyze the transaction patterns, along with other information such as store visit observations, customer shopping patterns, and comparative data from nearby stores. Only then does the ROC conclude whether questionable transactions were, more likely than not, the result of trafficking. Transactions with these patterns sometimes have valid explanations that support the idea they were the result of legitimate purchases of eligible food items, which is why opportunities are given to charged retailers to explain the questionable transactions cited. In this case, based on the suspicious patterns displayed and the other supporting evidence in the file - and in the absence of any reasonable explanations for such transaction patterns - the

preponderance of the evidence supports that the “unusual, irregular, and inexplicable” transactions and patterns cited in the letter of charges are the result of trafficking.

Summary

The ROC determined that Appellant likely trafficked in SNAP benefits. The charges of violations were based on the ROC’s assessment that substantial evidence exists that the questionable transactions occurring during the review period displayed patterns inconsistent with legitimate sales of eligible food to SNAP participants. The evidence the ROC considered in support of its determination included:

- The irregular SNAP transaction data of Appellant as compared to similar stores;
- Observations made during an store visit by a USDA contractor, including the inadequacy of the firm’s staple food stock to support such large transactions;
- The availability and characteristics of other SNAP-authorized stores located close to Appellant; and,
- Shopping behaviors of Appellant’s customers.

The transaction data and overall firm record demonstrate the patterns of unusual, irregular, and inexplicable SNAP activity for this firm is likely the result of trafficking.

Upon review, Appellant failed to prove by a preponderance of the evidence that the administrative action should be reversed. Appellant provided inadequate explanations for the suspicious transactions and insufficient evidence to legitimize its transaction data. It has not convincingly rebutted the ROC’s determination that Appellant most likely trafficked in SNAP benefits. The SNAP regulations are specific with regard to the action that must be taken if personnel of the firm have trafficked, which is that FNS must disqualify the firm permanently.

CIVIL MONEY PENALTY

Appellant requested a civil money penalty (CMP) contending that it had established and implemented an effective compliance policy and program to prevent SNAP violations. According to 7 CFR § 278.6(i) of the SNAP regulations, FNS may impose a CMP in lieu of permanent disqualification for trafficking.

For an Appellant’s request for a CMP to be considered, the regulations at 7 CFR § 278.6(b)(2) require that Appellant submit supporting documentation within ten days of receipt of the charge letter. Appellant was advised of this provision in the charge letter of June 13, 2018. A review of the administrative record indicates Appellant did not submit documentation to support its eligibility for this alternative sanction by this deadline.

7 CFR § 278.6(i) sets forth the eligibility requirements for a CMP:

The firm shall, at a minimum, establish by substantial evidence its fulfillment of each of the following criteria:

Criterion 1: The firm shall have developed an effective compliance policy as specified in Section 278.6(i)(1); and,

Criterion 2: The firm shall establish that both its compliance policy and program were in operation at the location where the violation(s) occurred prior to the occurrence of violations cited in the charge letter sent to the firm; and,

Criterion 3: The firm had developed and instituted an effective personnel training program as specified in Section 278.6(i)(2); and,

Criterion 4: Firm ownership was not aware of, did not approve, did not benefit from, or was not in any way involved in the conduct or approval of trafficking violations; or it is the first occasion in which a member of firm management was aware of, approved, benefited from, or was involved in the conduct of any trafficking violations by the firm

In support of Appellant’s contention that it is eligible for a CMP, it provided no documentation. In this regard, the various statements made by Appellant are not “substantial evidence” that fulfills each of the four criteria of 7 CFR § 278.6(i), demonstrating “that the firm had established and implemented an effective compliance policy and program to prevent violations.”

The standards of eligibility for a trafficking CMP are high. They require substantial proof that a compliance policy and program was established and implemented prior to the occurrence of violations. These standards exist to thwart attempts to falsely present compliance policies and programs that were not actually implemented prior to violations. As Appellant did not provide the required supporting documentation, the ROC did not assess a CMP. According to the requirements stated in 7 CFR § 278.6(b)(1), § 278.6(b)(2)(ii and iii), and § 278.6(i), Appellant is not eligible for a CMP in lieu of a permanent disqualification from participation as an authorized retailer in SNAP. The determination by the Office of Retailer Operations and Compliance to deny Appellant a civil money penalty is sustained.

CONCLUSION

The record has yielded no indication of error in the finding by the Office of Retailer Operations and Compliance that Appellant trafficked in SNAP benefits. A review of the evidence supports that it is more likely true than not true that program violations occurred as charged. Based on the discussion above, the determination by the Office of Retailer Operations and Compliance to impose a permanent disqualification against Mimi Tobacco & Grocery LLC from participating as an authorized retailer in SNAP is sustained.

RIGHTS AND REMEDIES

Applicable rights to a judicial review of this decision are set forth in 7 U.S.C. § 2023 and 7 CFR § 279.7. If Appellant desires a judicial review, the complaint must be filed in the U.S. District Court for the district in which Appellant’s owner resides, is engaged in business, or in any court

of record of the State having competent jurisdiction. This complaint, naming the United States as the defendant, must be filed within thirty (30) days of receipt of this decision.

Under the Freedom of Information Act, we are releasing this information in a redacted format as appropriate. FNS will protect, to the extent provided by law, personal information that could constitute an unwarranted invasion of privacy.
